

PERSONAL STATEMENT

Universitas Sebelas Maret (UNS)

Program: Bachelor of Data Science

Applicant: Mubashir Ali

Registration Number: 1902500130

Nationality: Pakistani

My name is Mubashir Ali, and I am applying to the Bachelor of Data Science program at Universitas Sebelas Maret. Born in Skardu, Gilgit-Baltistan, Pakistan, I have been fascinated by how data, technology, and scientific research can raise the quality of human life. Growing up in a region with limited technological infrastructure made me look toward fields where innovation can go hand in hand with communities for real impact.

My academic journey into the computational sciences began with a strong interest in biology, programming, and artificial intelligence. Over time, this interest grew into a passion for data-driven research. I have created a solid foundation through studying computational biology, machine learning, and computer science, with independent work on advanced projects in AI and genomics. These experiences shaped my decision to specialize in Data Science at the undergraduate level.

I have worked on several technical and research-oriented projects, which include CRISPR-Cas9 prediction tools, health-risk prediction models, protein structure analysis pipelines, and a VS Code extension used by thousands of researchers. In these projects, I gained hands-on experience in Python, data analysis, machine learning, and algorithm development. I founded Code with Bismillah, a learning platform through which I've created educational content, tutorials, and software tools that assist students and researchers around the world.

Complementing my technical work, I have always been involved in community learning and in the empowerment of young people. I've worked as a technical workshop host, mentoring students in AI, coding, and computational biology. That experience strengthened my communication, leadership, and teamwork skills; it reaffirmed my commitment to supporting science education.

I apply to Universitas Sebelas Maret due to its modern and research-oriented curriculum, strong emphasis on applied data science, and international academic environment. I am confident that UNS will provide the best platform for building advanced skills in machine learning, big data analytics, and artificial intelligence—all areas totally aligned with my long-term goals.

I see my future role as both a researcher and a data scientist in developing AI-based solutions for healthcare, genomics, and environmental monitoring. I strive to apply data science for improving diagnostics with the aim to contribute toward scientific discovery and technological progress in the developing regions of the world, including Pakistan. Studying at UNS enables me to acquire world-class knowledge and return meaningfully to the academic community.

Thank you for considering my application. I am truly excited about the opportunity to study at Universitas Sebelas Maret and contribute to its mission of innovation and global scientific advancement.

.

Sincerely,
Mubashir Ali
